

<u>LMS Platform</u>	<u>Company</u>	<u>Feedback</u>
Dayforce	Loomis	Go1 customers transitioning to Dayforce Learning have not yet gone live. They described the system as intuitive, easy to navigate, and straightforward for finding and downloading courses when the appropriate filters are used. The platform allows organizations to upload their own content, create employee learning groups, design training for managers and administrators, develop user guides and launch email templates, and connect completed learning and certificates to employee records. They noted that course filtering on both the administrator and employee sides requires attention and that skills associated with learning content do not connect to the skills library in Performance Management. Their organization chose Dayforce without evaluating other systems and is using Dayforce directly for implementation, with a significant number of consulting hours anticipated each year.
Dayforce	York Space Systems	Learning linked to onboarding, use LinkedIn learning and are able to integrate, learning plans, SMEs can easily create training, easy to create quizzes, create assessments, had a hands-off implementation process (did implementation by themselves without DF's help) had to manually create training from scratch instead of uploading all from last system (no import) employees like the experience, have to add each store item into the platform to build courses, can't upload PowerPoints (won't be a problem much longer),

Thrive	USAA Compression	Started Thrive launch to employees this January; September is when they started implementation; Gas Compression company; 1400 employees; 2 people on their L&D team. Looked at Schoox LMS; employees are mainly boots on the ground and

		don't want to spend too much time on training. Really liked the AI functionality of Thrive. For them they wanted a centralized communication, resources, HR policies, service documents, and training hub (not just LMS). Implementation took 3 months, smoothest implementation he has seen/been a part of. Within the first quarter – 85% of employees had launched and used the platform (even while acquiring another company this January). Employees enjoy doing safety training on the go with their phone. Didn't patch through HR system; instead through IT system as their current HR system is a mess (in the process of switching to Workday HRIS). Reporting is more robust in comparison to other LMSs (how long do they watch a video before they disengage, are they using their phone or laptop to do these trainings, what key words are employees searching – if a search gets 0 results); very interactive and engaging, visually appealing, easy and quick to navigate. Using Thrive as both an intranet and LMS. Employees enjoy using AI agent to find content quickly or find the answer to a question. Employees also enjoy pinning resources/trainings for quick access. Amazing customer service, especially their implementation team; met every Monday to get trained on a different section of the platform, by that Friday they'd meet up to make sure all tasks were done. Have had only minor issues like pictures not appearing correctly or GIFs not moving. Account Rep will listen to your recommendations and find solutions within a day or add it to a list of features to develop. Have had no employee complaints. Observed assessment not available on mobile yet but on the roadmap. Thrive Tribe – platform for customers to request features, recommend changes, find trainings on features. Enjoy the Spaces tab as it's like social media (like Reddit) and can link resources/videos.

Questions:

1. What do you wish you had known before implementation?
2. What is your current HRIS system

3. Did you use DF or a 3rd party for implementation?
4. Now that you have been administering the system for a while, are there things you would have configured differently?
5. What is your top one or two pain points in administering the system?
6. What do you hear from your employees about using the system?
7. What is your top one or two things that this system has made better for L&D?
8. Were you evaluating any other platforms? Why did you choose this one?
